DETAILED ACTION

Response to Amendment

1. This action is responsive to an Amendment filed 8/13/2008. Claims 25-40 are pending. Claims 25, 30, 35, 36 are amended.

Response to Arguments

2. Applicant's arguments with respect to claims 25-40 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 25, 27-30, and 32-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henmi (US 5,552,833) in view of Watanabe (US 5953481).

As to claim 25, Henmi discloses a reception device for controlling a recording module (e.g., image recording/reproducing apparatus 25; Fig. 9), comprising:

receiving means (e.g., reception means A; Fig. 9 and 16) for receiving a particular format file transmitted through a network (e.g., television-program table

Application/Control Number: 10/081,615

Art Unit: 2426

information is transmitted using teletext formats in a coding transmission system);

said particular format file including text based control commands (e.g., program start and program terminate information) that control said recording module (e.g., based on program start and program terminate information received, start instruction means 23 and termination instruction means 24 sends command to start/stop recoding program) (see col. 3, lines 30-47; col. 4, lines 1-14, 45-60; col. 6, line 4 through col. 7, line 11; col. 7, line 35-col. 8, line 45; col. 11, line 54 – col. 12, line 12);

extracting means (e.g., signal extracting section 1; Fig. 9 and 16) for extracting at least one of said text based control commands from the received particular format file (co. 6, lines 6-12; col. 11, lines 54-62);

control means (e.g., comparator means 22; Fig. 9) for controlling said recording module based on the extracted text based control commands (i.e., based on program start/terminate information received to start/stop recording),

wherein the control means converts the text based control commands to codes based on pre-registered product information of the recording module (i.e., "an image recording/reproducing apparatus control section 38 for generating a control signal to an image recording/reproducing apparatus 39 by control information obtained by the added data decoder section 36"; the product information/or control codes must known to the system in order for the system to control the recoding apparatus) (see col. 6, line 62 – col. 7, line 10; col. 11, line 54-col. 12, line 20; col. 13, line 55-col. 14, line 15),

Application/Control Number: 10/081,615

Art Unit: 2426

wherein said control means uses a timer reservation function to reserve an operation time of said recording module (see col. 6, line 62 – col. 7, line 10).

Henmi does not specifically disclose recording modules with different code systems are controlled after the recording modules are registered.

Watanabe discloses recording modules with different code systems are controlled after the recording modules are registered (e.g., registers and stores VTR remote control code in memory) (see col. 7, line 61-col. 8, line 22).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Henmi's system to include control code register as taught by Watanabe in order to provide an editing method in which, when editing information signals recorded on a recording medium by using a remotely operable external recording apparatus, a search for editing points on the recording medium can be easily made and the editing work can be efficiently carried out (see col. 6, lines 50-55).

As to claims 30 and 35-36, they contain the limitations of claim 25 and are analyzed as previously discussed with respect to claim 25 above.

As to claims 27 and 32, Henmi discloses that said operation time of said recording module is stored in a memory (e.g., means 5; Fig. 9 and 16) (see col. 6, line 4 through col. 7, line 11; col. 12, lines 1-8).

Application/Control Number: 10/081,615

Art Unit: 2426

As to claims 28 and 33, Henmi discloses that said recording module is a video recording module (see col. 4, line 49 – col. 5, line 14; col. 6, lines 52-67).

As to claims 29 and 34, Henmi discloses that said recording module is a television program recording module (col. 4, line 49 – col. 5, line 14; col. 6, lines 52-67).

5. Claims 26 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henmi (US 5,552,833) in view of Watanabe (US 5953481), further in view of Sartain (US 5,914,712).

As for claims 26 and 31, note the discussion above, Henmi fails to disclose that said network through which the data is received is the Internet.

In analogous art, Sartain disclose that said network is the Internet (see col. 7, lines 14-37).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to include said network being the Internet as taught by Sartain in the recoding system of Henmi as modified by Watanabe for the typical benefit of transferring data to anywhere in the world by taking advantage of the global network comprising millions of interconnected computers.

Art Unit: 2426

6. Claims 37-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henmi (US 5,552,833) in view of Watanabe (US 5953481), further in view of Haroun et al. (Patent # US 5787259).

As for claims 37 and 39, note the discussion above, Henmi discloses recording module and storage means (see col. 6, line 4 through col. 7, line 11).

Henmi fails to disclose recording module is registered in a storage means accessible by said reception device.

In analogous art, Haroun disclose recording module is registered in a storage means accessible by said reception device (e.g., VCR is connected to computer 15 with IEEE 1394/USB bus which will cause computer 15 assign a ID to VCR; Fig. 1) (see col. 4, lines 5-30).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to include device registration as taught by Haroun in the recoding system of Henmi as modified by Watanabe for the typical benefit of ease of use, improved functionality, and reduced costs resulting from the elimination of the interface components of the consumer electronics devices (see col. 1, lines 25-29).

As to claims 38 and 40, Haroun discloses the registration information is retrieved each time said text control commands are received by said receiving means (e.g., every command string includes device's name) (see col. 8, lines 39-55).

Application/Control Number: 10/081,615 Page 7

Art Unit: 2426

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nishigaki et al. (US Patent # 5900912) is cited to teach by detecting start time data from video signal to start recoding video.

Inquiries

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jun Fei Zhong whose telephone number is

Art Unit: 2426

571-270-1708. The examiner can normally be reached on Mon-Fri, 7:30-5:00

EST.

If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Vivek Srivastava can be reached on 571-272-7304. The

fax phone number for the organization where this application or proceeding is

assigned is 571-273-8300.

Information regarding the status of an application may be obtained from

the Patent Application Information Retrieval (PAIR) system. Status information

for published applications may be obtained from either Private PAIR or Public

PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-

free). If you would like assistance from a USPTO Customer Service

Representative or access to the automated information system, call 800-786-

9199 (IN USA OR CANADA) or 571-272-1000.
